

# AMYPAD Deliverable 2.15

## Descriptive Report of Amyloid PET Scan Quantification IV

---

### Publishable Summary

This deliverable is a descriptive report on the final amyloid PET scan quantification of all consecutive and valid participants that have been analyzed from the two AMYPAD trials. It includes data from 2552 PET scans from the Prognostic and Natural History Study (PNHS) and 836 patients from the Diagnostic and Patient Management Study (DPMS). All the analyses have been performed for the individuals whose amyloid PET imaging data passed quality control for the main quantitative outcome variable for both trials (Centiloid with the whole cerebellum as reference region).
